

ISM Semester Project Phase 2

Flatt Falls College: Clubs Database

(Due Date: 11:59 PM, April 11)

For phase 2 of this project you will be transferring your Phase 1 drawing into a Lucid Chart Extended ER diagram with notation similar to that required for your week 6 Lucid Chart Assignment.

That is, you are required to **list the entities, all of their attributes, the data types (lengths where appropriate), and NOT NULL (NN) specifications if appropriate. In addition, you must specify the appropriate cardinality for all relationships.**

The next page presents a skeleton of the Entities and relationships needed. I have identified the necessary entities and the Primary Key (PF) and Foreign Key (FK) attributes needed for the correct (*or at least instructor approved*) structure for this database. In addition, I have indicated the relationship between entities that are required, but I have not specified their cardinalities.

NOTES: For the requirement that each expenditure be approved by either the Club President or the Club Advisor, I have chosen to simply add an ApprovalFlag attribute to the Club Expenses entity that has values of P for President or A for advisor. Also, note that each Club has at most one advisor, while an Advisor can advise multiple Clubs.

For phase 2 of this project, based upon the skeletal model shown and the feedback you received from your Phase 1 submission, complete a fully specified EER model in Lucid Chart including full specifications for all attributes and relationship cardinalities as described above.

Print your completed chart as a PDF file (being sure to add your name) and upload it to Canvas as your submission for this Project Phase.

NOTE: You can recover half of the points lost in Phase 1, if your Phase 2 is perfectly specified.

Flatt Falls Student Clubs Conceptual Design (Phase 2 Blueprint)
